SharePoint Add-in

Active Directory Address Book is a SharePoint Web Part / Add-in: it's a web-application deployed on **your** Office 365 SharePoint environment, and available from the Microsoft AppSource. Once deployed, and you make use of it from any web sites page.

We provide you and/or your system administrator the scripts to feed your Address Book with the data from different sources (Azure AD, On-Premise AD, Microsoft Teams, etc.). You may customize the centralized data and your Address Book(s) as you need.

Group by Microsoft Teams: the must have visibility

With the very fast propagation of Microsoft Teams, it was obvious to provide your collaborators an easy way to see the existing Teams and Teams members, the same way you see the departments of a company.

As simple as an Address Book

Fully functional for **free** up to 25 contact entries, it can be evaluated very quickly and easily.

We provide you with standard scripts and features, but there is no limit to customization: each company has a unique identity, and we have the best way to put everything together for you, the way you want.

We'll solve for you this piece of the puzzle: your people, your identity, how do you stick everything together:
